

A SOLID SOLUTION TO BOILER AND COOLING TOWER WATER TREATMENT

The world of water treatment in boilers and cooling towers is changing.

While liquid chemicals remain the No. 1 choice among water treaters, more and more are beginning to explore the use of solid chemicals for this crucial task. The benefits of solid-chemical use in water treatment are many and varied:

- Reduced shipping costs
- Reduced inventory space
- Reduced disposal costs
- Elimination of drum-handling and disposal
- Reduced caustic discharge to sewer
- Reduced worker exposure to hazards

Additionally, solid chemicals are the best choice for facility managers who are looking for “green” cleaning methods and cleaning agents that reduce the impact on the environment while protecting the health and well-being of cleaning personnel.

As the world’s leading independent manufacturer of dispensing and portioning equipment, Hydro is perfectly positioned to lead the revolution in the use of solid chemicals for water treatment, and offer the right solutions for liquid chemical applications. Hydro is known for its leadership in cutting edge technology, customer care, and designing innovative customized systems for the ever-changing water related industry. For expert help with your water treatment equipment needs visit www.hydro-watertreatment.com, or call 1-800-543-7184.

Hydro Water Treatment Technologies has developed a versatile line of dispensing products for use with solid chemicals:

Model 590 Single-Product Dissolver with Shutoff

Model 591 Continuous-Feed System

Model 593/594 Gravity-Feed System with Timer or Integrated Solenoid

Model 595 Small Single-Product Dissolver

Model 596/597 Modular Solenoid System
